

Guavy Expands Market Sentiment Intelligence to U.S. Equities

The fourth market on Guavy's intelligence engine launches ahead of schedule, with a multi-market Wire delivering thousands of scored intelligence records daily.

CALGARY, Alberta, Canada. August 18, 2026. Guavy, the market intelligence layer for the agentic era, today brought real-time sentiment to U.S. equities, scoring 32 companies at launch. Equities is the fourth market Guavy reads in real time, after crypto, commodities, and forex, and it arrived ahead of schedule. Coverage is available now through a REST API and native MCP server.

The early launch of equities shows the advantage of Guavy's architecture: new markets can be added quickly without rebuilding the intelligence engine from scratch.

"When we said a new market is the same engine, not a rebuild, this is what we meant," said Stephen King, CGO & Chief Evangelist at Guavy. "We committed to equities in Q4 and delivered ahead of schedule. The same live infrastructure already supporting three markets allowed us to bring U.S. equities into production in a very short time frame."

Guavy scores market information across multiple dimensions, including Sentiment, Clout, Speculation, FUD/FOMO and Tone, with directional confidence and timeframe. Scoring is adapted to the characteristics of each market and instrument.

Guavy's live sentiment records are timestamped when produced and preserved rather than retrospectively rewritten, creating a point-in-time record of market sentiment as it existed.

Without pre-processed intelligence, AI agents have to find, process and interpret market information themselves, which can be costly and time-consuming. Instead, Guavy delivers thousands of continuously scored, structured intelligence records they can use immediately.

"As models become more capable and accessible, the quality of the intelligence they consume matters more," said Donna Tilden, CEO of Guavy. "Equities is the market our users asked for next, and we delivered quickly. Our ability to rapidly extend Guavy into new markets is central to our roadmap as we broaden coverage and work more closely with clients."

Alongside equities, Guavy launched unified multi-market licensing and Guavy Wire, a real-time feed delivering thousands of scored intelligence records daily across crypto, commodities, forex and equities. The Guavy Wire can be found at guavy.com/wire.

Guavy has also streamlined its documentation for both developers and AI agents and introduced Recipes: "real things to build" that combine prompts with pre-written code users can copy into their own agents or applications. Recipes are organized and searchable by market and can be found at guavy.com/recipes.

Guavy also previewed its Custom Business Solutions for enterprise clients, which will launch later this quarter. Enterprises will be able to apply Guavy's intelligence engine to client-defined universes, from complex portfolios to selected companies, competitors and topics. Custom webhooks will deliver changes in sentiment and signals directly into client systems and AI workflows, extending

Guavy's real-time intelligence beyond its standard market coverage. The full enterprise offering will be announced later in Q3.

Availability

Coverage of 32 U.S. companies is live today alongside crypto, commodities and forex. Guavy is sold by market, with subscriptions starting at \$49 per month, while a free sandbox tier gives quants, traders, and developers immediate access to Guavy's scored market intelligence through its REST API or native MCP server.
